

## TABLEAU TASK

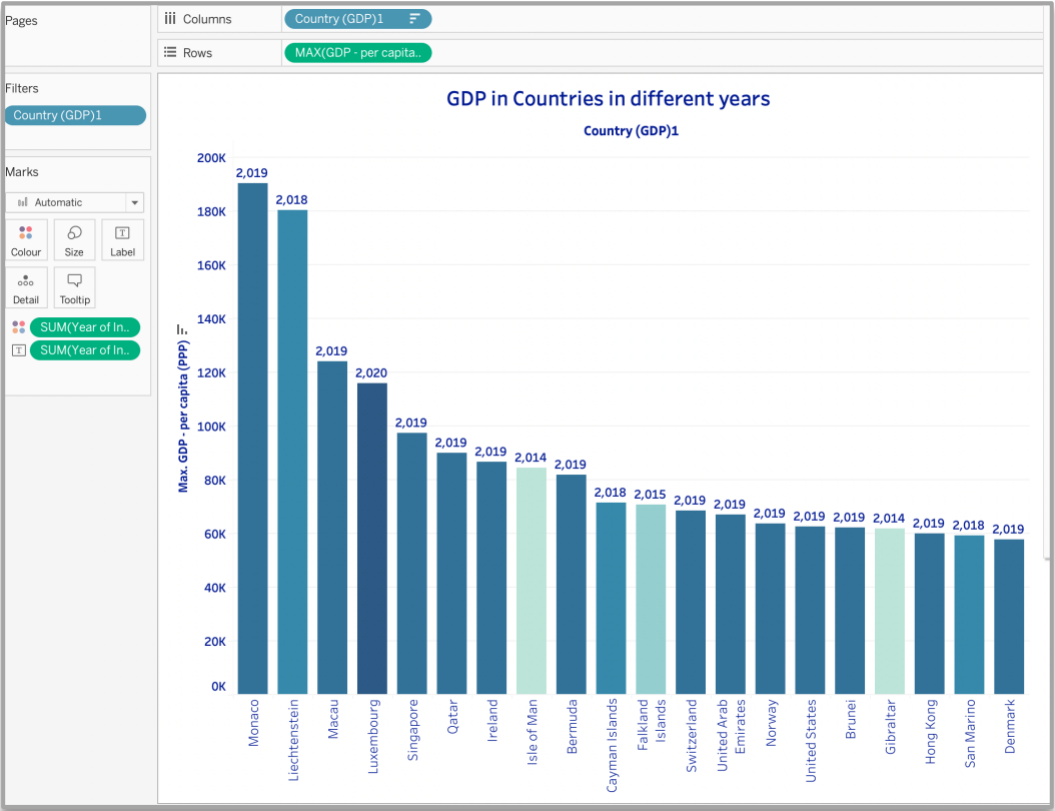

- Opened Tableau in my desktop and upload the excel The wealth nations, I make sure that I'm using the one with filters. I have created relationships between them and Life expectancy, GDP and smartphones.

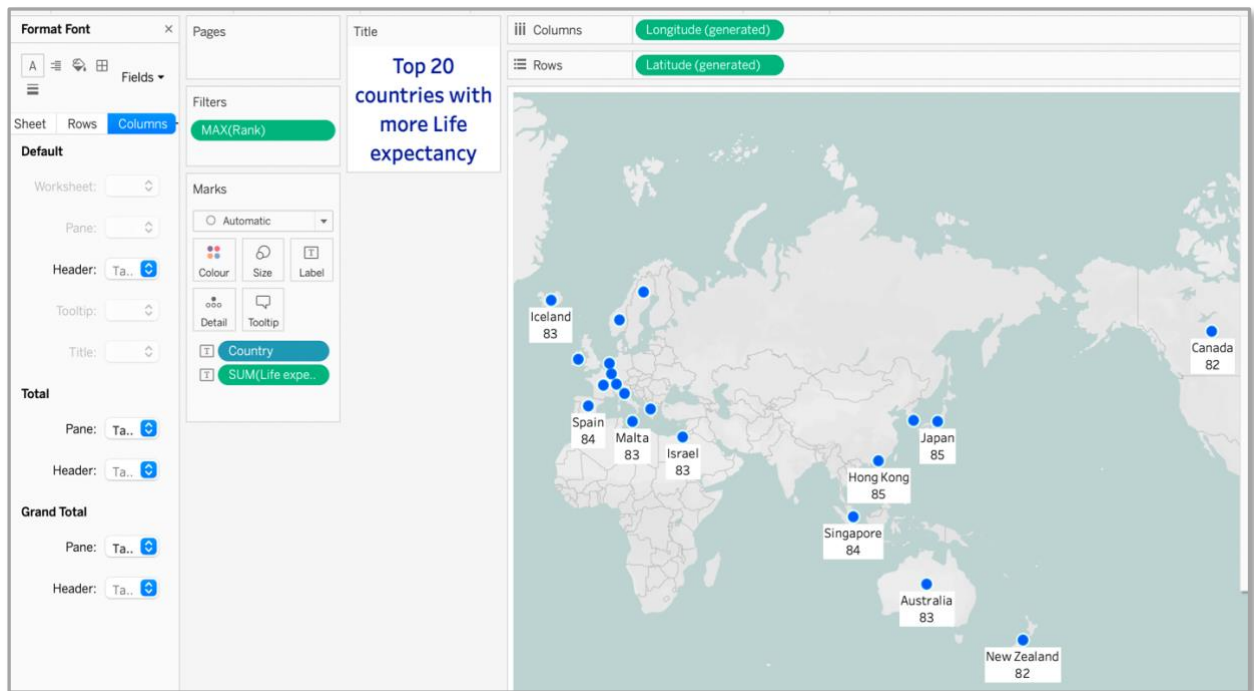

- Cleaning the data, I realized the Life expectancy was a decimal number so I changed to whole numbers for my dashboard.
- Data was filtered as Max GDP per capita with the top 20 highest countries.

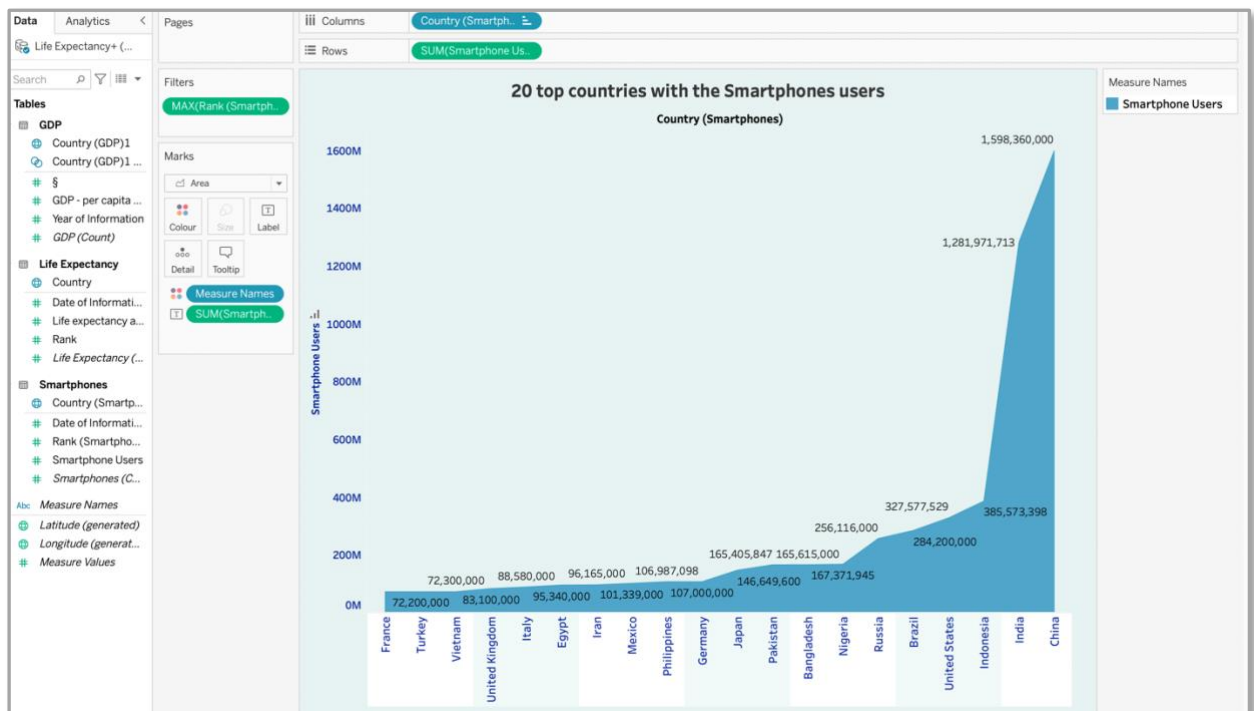

- I created a second chart using a bar chart just to show the years in where the data was collected. For this I have selected blue palette

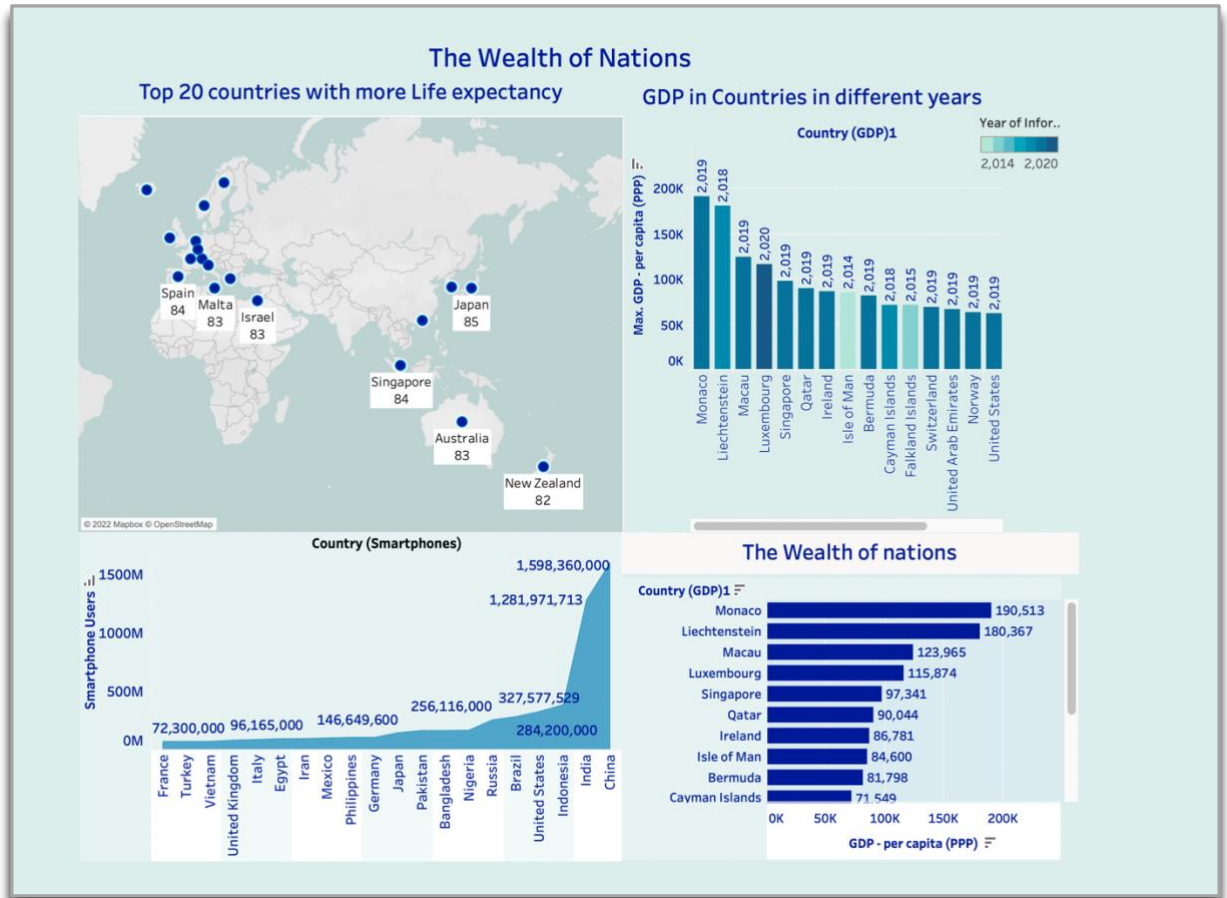

- The third graphic a Map to show the Top 20 countries with Life expectancy and years.

- Smartphones analysis I used a filter to the rank of the top 20 countries and the selected an area graphic, the users of smartphones are shown in the graphic.

- Finally, a dashboard was created and saved in Tableau public and looked as below,
